## Part 3 :

Run “minikube start” and apply the deployment and service files.

The screenshot shows the VS Code interface with the following details:

- EXPLORER**: Shows the project structure under "CLOUD DOCKER ASSIGNMENT". Files include flask-deployment.yaml, flask-rc.yaml, flask-service.yaml, mongoDB-related files (mongodb-deployment.yaml, mongodb-pvc.yaml, mongodb-service.yaml), prometheus.yaml, requirements.txt, app.py, AWSCLV2.pkg, docker-compose.yml, and Dockerfile.
- PROBLEMS**: Displays the output of the "Cloud Docker Assignment minikube start" command. The log includes:
  - minikube v1.31.2 on Darwin 14.0 (arm64)
  - Using the docker driver based on existing profile
  - Starting control plane node minikube in cluster minikube
  - Updating the running docker "minikube" container ...
  - Preparing Kubernetes v1.27.4 on Docker 24.0.4 ...
  - Verifying Kubernetes components...
  - curl -s https://kubernetes.io/minikube/storage-provisioner:v5
  - Enabled addons: storage-provisioner, default-storageclass
  - Done! kubectl is now configured to use "minikube" cluster and "default" namespace by default
- TERMINAL**: Shows two zsh sessions. The first session is a standard zsh shell, and the second session is a zsh shell within the minikube cluster.

The screenshot shows the AWS EKS Clusters list page, displaying one cluster named 'my\_todo'.

Cluster name	Status	Kubernetes version	Provider
my_todo	Active	1.28	EKS

Config setting showing pvc

The screenshot shows the AWS CloudWatch Metrics interface. A log stream named 'my\_tod...' is selected. The first log entry is displayed:

```
2023-11-09T21:49:00+00:00 my_tod... 2023-11-09T21:49:00Z {"level": "INFO", "message": "MongoDB pod created"}
```

## Part 5 :

Create a ReplicationController configuration file (flask-rc.yaml).  
Apply the Replication Controller “kubectl apply -f flask-rc.yaml”  
We can test it by deleting one of the pods and it recreates it.

## Part 6:

Update the code to have a rolling update strategy.

## Deploy the flask-deployment.yaml

## Push a new updated image to ECR

Use the updated image from ECR and update the deployment.

Run the command to check if the rollout was successful.

It will output deployment “flask-app” successfully rolled out.

You can also run “kubectl describe deployment flask-app” to check if the application is scaling up and down.

## Part 7 :

Made the changes on the livenessProbe so that pods will have an error and new pods will be formed when there is an error. Hence we gave the port value as 5001.

`livenessProbe`: A liveness probe is used to check if the container is alive and healthy. It checks if the container can establish a TCP connection on port 5001. If the container fails the liveness probe, Kubernetes will restart it.

- `tcpSocket`: This is the type of probe, and it checks for a TCP connection.
- `initialDelaySeconds`: Specifies the number of seconds to wait before starting liveness probes.
- `periodSeconds`: Specifies how often to perform the liveness probe.
- `readinessProbe`: A readiness probe checks if the container is ready to receive traffic. It checks if the container can establish a TCP connection on port 5000. If the container fails the readiness probe, it won't receive incoming traffic.
  - `tcpSocket`: This is the type of probe, and it checks for a TCP connection.
  - `initialDelaySeconds`: Specifies the number of seconds to wait before starting readiness probes.
  - `periodSeconds`: Specifies how often to perform the readiness probe.

The last screenshot explain the pod shows warning , unhealthy , the killing and then backoff . Hence we have configured the pods and monitored the health of pods using kubectl.

## Part 8 :

Installed helm , prometheus .

```

Last login: Sun Nov 12 18:03:44 on ttys001
-- -- bash
The default interactive shell is now zsh.
To update your account to use zsh, please run `chsh -s /bin/zsh`.
For more details, please visit https://support.apple.com/kb/H208059.
Srushti-Air: ~ sruhtijagtap$ brew update
Srushti-Air: ~ sruhtijagtap$ brew install --HEAD helm
Srushti-Air: ~ sruhtijagtap$ helm repo add prometheus-community https://prometheus-community.github.io/helm-charts
Srushti-Air: ~ sruhtijagtap$ helm search repo prometheus
Srushti-Air: ~ sruhtijagtap$ curl -fsSL https://raw.githubusercontent.com/Homebrew/install/master/install.sh
==> Checking for 'sudo' access (which may request your password)...
Password:
This script will install:
/opt/homebrew/bin/brew
/opt/homebrew/share/doc/homebrew
/opt/homebrew/share/man/man1/brew.1
/opt/homebrew/share/zsh/site-functions/_brew
/opt/homebrew/etc/bash_completion.d/brew
/opt/homebrew

Press RETURN/ENTER to continue or any other key to abort:
==> /usr/bin/sudo /bin/sh -c /bin/install -R sruhtijagtap:admin /opt/homebrew
==> Done. You can now log out.
HEAD is at d5d51d944 Merge pull request #16286 from dependabot/bundler/Library/Homebrew/unf_ext-0.9.9
Updated 1 tap (homebrew/core)
Warning: /opt/homebrew/bin/brew is not in your PATH.
Instructions on how to configure your shell for Homebrew
can be found in the 'Next steps' section below.
==> Installation successful!

==> Homebrew has enabled anonymous aggregate formulae and cask analytics.
Read the analytics documentation (and how to opt-out) here:
  https://docs.brew.sh/Analytics
No analytics data has been sent yet (nor will any be during this install run).

==> Homebrew is run entirely by unpaid volunteers. Please consider donating:
  https://github.com/Homebrew/brew#donations

==> Next steps:
- Run these two commands in your terminal to add Homebrew to your PATH:
  (eval "$(/opt/homebrew/bin/brew shellenv)") >> /Users/sruhtijagtap/.zprofile
  eval "$(/opt/homebrew/bin/brew shellenv)"
- Run brew help to get started
- Further documentation:
  https://docs.brew.sh

Srushti-Air: ~ sruhtijagtap$ /Users/sruhtijagtap/.zprofile
sh: /Users/sruhtijagtap/.zprofile: Permission denied
Srushti-Air: ~ sruhtijagtap$ (sh; echo 'eval "$(/opt/homebrew/bin/brew shellenv)"') >> /Users/sruhtijagtap/.zprofile
Srushti-Air: ~ sruhtijagtap$ eval '$(/opt/homebrew/bin/brew shellenv)'
Srushti-Air: ~ sruhtijagtap$ brew
Srushti-Air: ~ sruhtijagtap$ brew help
Example usage:
  brew search TEXT|REGEX
  brew info [FORMULA|CASK...]
  brew install FORMULA|CASK...
  brew update
  brew upgrade FORMULA|CASK...
  brew uninstall FORMULA|CASK...
  brew list [FORMULA|CASK...]
Troubleshooting:
  brew config
  brew doctor
  brew install --verbose --debug FORMULA|CASK

Contributing:
  brew create URL [--no-fetch]
  brew edit [FORMULA|CASK...]

Further help:
  brew commands
  brew help [COMMAND]
  man brew

```

Made slack channel and webhook . The slack channel can be accessed via terminal and we can send text messages there .

The screenshot shows a Slack channel interface. The channel is named "cc-assignment2".

**Channel Header:**

- Threads
- Mentions & reactions
- Drafts & sent
- Canvases
- Slack Connect
- Files
- More

**Messages:**

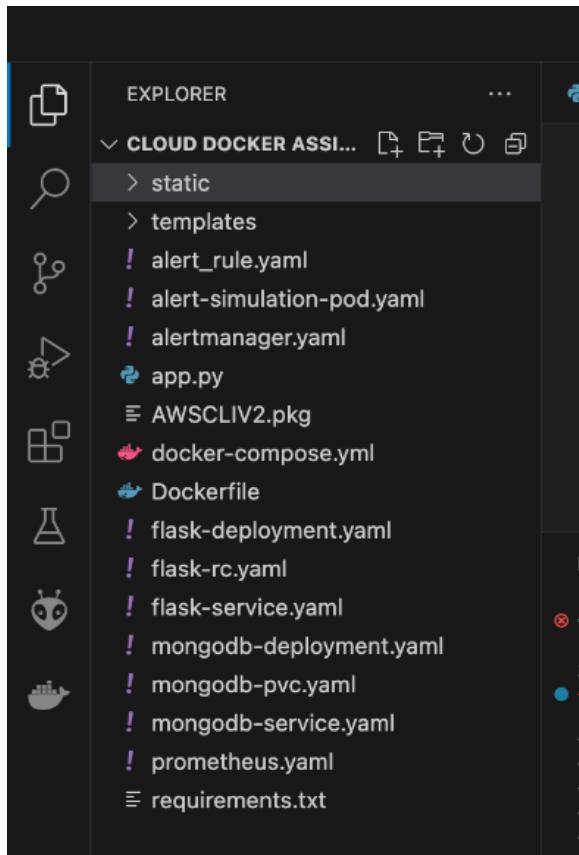

- Srushti Mahendra Jagtap joined cc-assignment2.
- Srushti Mahendra Jagtap added an integration to this channel: incoming-webhook.
- incoming-webhook This is a test message from the webhook!
- incoming-webhook hey sru...  
hey sid!

**Message Input:**

Message to cc-assignment2

+ Aa 😊 @ [ ]

Total files :

Flask deployment and service files . I have updated part 6 and part 7 for rolling update and health monitoring in deployment file itself .

Flask rc is for replication controller .

mongo db deployment , pvc and service files

Prometheus file

Alert-simulation-pod for purposefully causing alert

Alert rule and alertmanager file for part 8 .
